

Sean's Fine Writing Instruments

*Personalized handmade writing instruments.
High quality finish. Roller ball, Ball point and Fountain Pens.
Rhodium, Gold, Titanium High quality kits.
Timbers, Acrylic, Alumilite, Embedded Objects.*

THINGS YOU NEED TO KNOW ABOUT MY PENS

1. They are handmade pens, and each pen takes approximately between 3-5 hours depending upon the kit and complexity of the material being turned.
2. The kits are imported, or bought from Australia. Most of the kits are made in Taiwan under very strict quality assurance conditions.
3. I provide warranty of 1 year for the material that I have turned to make your pen. I can't however provide warranty for the kit as I don't manufacture it myself and I don't get any warranty on them either.
4. Each pen is hand turned, and sanded to 12000 grit and then finished with 20 coats of Cyanoacrylate and polished with microcrystalline wax. The procedure is very complex and needs fine attention to detail.
5. The pen you order will vary in colour and pattern from the pictures, as each piece of timber or resin or metal is unique. In many ways the pen you get is one of a kind as each natural piece of timber will be different.
6. The materials on the kit vary from ordinary chrome, to 22K Gold plated, Rhodium, Gold Titanium, Black Titanium and Rhodium

HOW DO YOU SELECT A PEN?

1. First decision to make is whether you prefer a ball point pen, roller ball or a fountain pen.
2. Then you need to decide the kit you like.
3. Then decide on the material you would like to have the pen made. Timber, Resin, Metal or Hybrid
4. Fountain pen kits are : RH, Maj, Sceptre, Pris
5. Ball point pen kits are: Sierra, Sierra Exec, Bolt Action, Knights Armour, Victorian
6. Rollerball kits are: RH, Maj, Sceptre, Com, Pris
7. Australian timbers: Most Australian featured timbers are available like Jarrah, Tasmanian Myrtle, Olive, Red gum, Silky Oak, Sheoak, Lace Sheoak, Tasmanian Huon Pine, Tasmanian Black wood, Tasmanian Celery Top Pine, Tasmanian Leather wood, Mango, York Gum Burl, Jarrah Burl, and several others, some pictures are included for easier selection. Please ask if you need a specific wood and if it's available I will make it.
8. International Timbers: One that is hugely popular and comes with a certificate of authenticity is Bethlehem
9. Olive Wood, Alaskan Birch (certificate included from the Matanuska forest in Alaska), North American Spalted Hackberry, North American Spalted Pecan, North American Spalted Tamarind, Maple, American Walnut, Indian Teak Wood, Indian Rosewood, Indian Ebony (pure black or black and tan), Amboyna Burl, Cocobolo and several others.
10. Resin and Timber Hybrids: I've also got some excellent Resin and Timber Hybrids like Banksia in Resin (blue, purple, red, yellow, green). There is Pine cone in Resin from USA and Canada again in various colours (Gold yellow, Red, Blue, Light blue, mixed colours). Acorn in Resin (Christmas colours and Black). Palm root in resin various colours. There are pictures at the back which can aid in selection.
11. Highly Exotic Resin Blanks: American Alligator Jaw bone, Stag antler in Resin, Pheasant Feather in Resin (only available for Sierra, Sierra Executive & Com Pens) South West Carpet Python, Stimson Python (available for Sierra & Executive Sierra pens)
12. Tru-stone: Tru-Stone is manufactured from approximately 85% natural stone ore that has been pulverized to a powder and then mixed with pigments and acrylic resin. It is then compressed into blocks and cut to size. The finished product is a material that resembles the natural stone but can be turned and machined with standard wood tools. Each colour varies in hardness, and can be difficult to turn. There are variety of colours, some pictures are included. There are lots more.

WHAT IS M3-MACROMOLECULAR COMPOUND?

Metal: Metal pens are commonly found in pen stores, so I only do a special metal alloy pen called M3. M3, short for Macro-Molecular Materials are part of the new breed of new age designer materials that make everything from the Stealth Bomber to the International Space Station possible. These materials are made with high purity metals and other exotic elements that have been deconstructed to the macro-molecular level, homogenously combined and then reconstructed with highly refined proprietary chemical binders. Metal deconstruction requires very specialized equipment. Gas Metal Atomizer that super heats the metal and then shoots it with water, gas or plasma causing it to explode into molecules of specific shape and size. Heat, pressure and an exothermic chemical reaction cause the molecules to cross link forming a new material with a unique macro-molecular structure. Because the molecules are distributed homogenously through a process known as the Micelle Phenomenon, the new material gains the benefit of all the unique characteristics of the individual components.

Originally developed for aerospace and the military the engineers at M3 Composite Industries (M3ci) uncovered a host of aesthetic qualities that build on the remarkable benefits of these materials. The proprietary M3ci process together with the natural interplay of the metals and elements creates exotic metal colours, beautiful random wood grain patterns and metal combinations that were never before possible. Deep, dimensional, mirror finishes with galactic star field qualities make for a surface that is mesmerizing and desirable.

For example; M3 Copper is produced by applying the M3 macro-molecular process to pure copper and producing a completely new form of copper with a unique molecular structure. This new M3 Copper will literally last forever where regular copper will ultimately oxidize and corrode over time. The new molecular structure allows for an increased strength to weight ratio with enhanced surface characteristics while at the same time being unbelievably easy to turn, cut, shape and polish with standard wood working tools.

HOW IS PRICING DETERMINED?

The pricing depends upon a number of factors:

1. Which kit you require?
2. What material you have selected for the body of the pen?
3. What type of case you have selected? Leather, Olive, Velvet Sleeve, Box etc
4. Prices vary based on the above, so please don't assume the price in the catalogue for a specific pen is what you are going to pay. Please don't hesitate to ask the price for your specific pen

WHY DO I MAKE PENS?

1. I love working with my hands, and especially with woodcrafts.
2. It's a great hobby and I am able to make something unique and individualised according to the taste and requirement of the client. It is a custom made product and most importantly useful in day to day life.
3. It's a great downtime for me, and I get to relax and enjoy after a stressful day at work.
4. The proceeds from the pen making help to replenish the materials and any profits made are used for charitable causes.

HOW TO ORDER THROUGH THE WEBSITE

Just send me an email with your requirements & postal address with post code. Postage costs will be actuals with no margin. Once the order is confirmed I will require a non-refundable deposit.

I only accept payment through PAYPAL, which means increased security for both of us.

Paypal Email: tgsean@bigpond.com

I really hope that you will enjoy the process of selecting your unique pen as much as you will enjoy using them
